ABSTRACT

PURPOSE: To avoid accidental erasure or change of information recorded on a recording medium and to secure the protection of information by providing a device detecting the information representing the propriety of implementation of at least one of the recording, reproduction and erasure of the information to a main body of a medium card.

CONSTITUTION: An information display section 3 displaying whether or not it is possible to implement at least one of the recording, reproduction and erasure of the information is provided to a main body 1 of a medium card. Thus, when a recording card is loaded to the device main body shown in figure in a recording medium card processing unit and a light beam radiated from a light emitting element 4 passes through the information display section 3 and received by a light receiving element 5, the recording medium card is discriminated to be in the state of, e.g., information write enable. The information recorded on the recording medium is not erased or changed accidentally and secured for the protection by providing the recording medium card and the recording medium card processing unit.
